

Privacy & Decorative Film

Fine Acid Etch - White

Code: PA902

Opalux® translucent privacy screening films are used to give two-way privacy without seriously reducing the natural light level. These films have a finely textured matt finish, and are applied to new or existing glass.

For both new build and refurbishment projects, Opalux® privacy screening films offer a cost effective and flexible alternative to traditional acid-etching, sandblasting or printing. These films allow freedom in the initial glass specification, with privacy being allocated later, when and where it is required, quickly and easily applied on site without removing the glass.

As well as adding a distinctive designer style to your office interior, this allows some through-vision for reception areas and meeting rooms, where total screening is not required, but a degree of privacy and a high light transmission are desirable.

Opalux® films can also be used to produce manifestation bands for large glazed areas.

Features	Benefits
High light transmission	Two-way privacy whilst maintaining abundant light levels
Quick, retro-fit installation	Introduce privacy when and where it is required; ideal for glazing in rooms with a change of use
Removable	Gives the option to remove, replace or update in the future
Incorporate manifestations	Can be used to help satisfy Health & Safety requirements for large areas of uninterrupted glazing, such as glass partitions
